

Salesforce CRM Implementation Plan

The Chai Shop & Co. Architecture & Setup Documentation

Prepared By: Sreemathi M
Platform: Developer Edition

Deployment Ready

Executive Overview

This document details the complete end-to-end configuration of Salesforce CRM tailored for **The Chai Shop & Co.** The setup addresses dual operations: high-frequency B2C retail orders (walk-in & online) and B2B enterprise corporate account relationships.

1. ENVIRONMENT SETUP & ACCESS WORKSPACE

Developer Edition Provisioning

Configured a dedicated Salesforce Developer Edition org workspace to execute custom data modeling, UI tailoring, business automation, and reporting infrastructure without standard production risk.

Workspace Activation

Verified org activation link, established secure administrator security policies, and established standard time-zone/currency configurations to fit retail operations.

2. DATA MODEL & CUSTOM OBJECTS

Custom architecture engineered via `Object Manager` to cleanly distinguish corporate B2B contracts from individual retail consumers:

Object Label	API Name	Business Purpose & Config Details
Employer Accounts	<code>Employer_Account__c</code>	Handles B2B corporate relationships, employer partner contact tracking, and B2B engagement. Set to <i>Deployed</i> with Reports, Activities, & Field History enabled.
Customer Accounts	<code>Customer_Account__c</code>	Manages regular retail profiles, tracking purchase frequency, delivery locations, and individual order metrics.
Enterprise Account	<code>Enterprise_Account__c</code>	Dedicated schema for high-volume corporate accounts, long-term catering subscriptions, and institutional sales tracking.

3. NAVIGATION & APP CUSTOMIZATION

Custom Navigation Tabs

Created distinct, visual tabs (`Customer Accounts` , `Employer Accounts` , `Enterprise Account`) with custom icon sets for intuitive data lookup.

Lightning Usage App

Bundled all specialized objects, navigation tabs, and operational dashboards into a unified custom Lightning App designed for point-of-sale and sales team usage.

4. PAGE LAYOUTS & ORDER RECORD TYPES

To facilitate distinct checkout channels, customized UI page layouts were mapped to specific record types under the **Customer Account** object:

Online Orders (**Online Order**)

- Tailored for app/web digital transactions.
- Captures delivery address details & geolocation tracking.
- Displays real-time digital payment method confirmation.
- Monitors dispatch & delivery ETA stages.

Walk-In Orders (**Walk-In Order**)

- Streamlined layout built for high-speed counter POS.
- Tracks quick cash/terminal register payment notes.
- Immediate order fulfillment and kitchen status ticks.
- Reduces click friction during peak store rush hours.

5. COMMUNICATION & PROCESS AUTOMATION

Classic Email Templates & Alerts

Designed standardized HTML templates to maintain brand consistency across customer communication touchpoints:

- **Order Receipts:** Automated post-purchase receipt generation for online/retail channels.
- **Enterprise Deal Alerts:** Automated high-priority email alerts sent to store management whenever a large corporate contract closes.

Flow Automation (**Scheduled-Triggered Flows**)

Configured background flows to execute recurring maintenance tasks, batch status updates for overdue catering invoices, and refresh daily customer activity metrics without manual staff intervention.

6. ANALYTICS & EXECUTIVE DASHBOARDS

Implemented business intelligence reports to provide operational visibility across retail and enterprise branches:

Report Name	Key Metrics & Visual Focus
Customer Account Sales Report	Analyzes retail order volume, trends across store locations, top buyer categories, and ordering frequency per channel.
Enterprise Account Sales Report	Tracks bulk corporate orders, recurring catering contract renewals, pipeline performance, and account manager conversion rates.

Executive Performance Dashboard

Consolidates all sales, channel, and enterprise analytics into a single centralized Lightning Dashboard, empowering business executives with real-time metric visualizations for actionable decisions.
